

Didenur Sezen

Computer Engineering Student | Software & Data Technologies

Email: didenurszn@gmail.com | Phone: +90 539 503 0687 | [LinkedIn](#) | [Github](#)

Professional Summary:

Computer Engineering student with hands-on experience in Python, Java, C#, and web technologies including HTML, PHP, SQL, and .NET/Blazor. Experienced in software development, **API integration**, **data processing**, **distributed systems**, graph analytics, **blockchain networks**, knowledge representation, and **Linux systems** through academic, internship, and personal projects. Developed projects involving **Apache Spark**, **Neo4j Graph Data Science**, **RDF/OWL**, **Solidity**, and **PyQt5**, while gaining practical experience in collaborative software development and API testing during an internship. **Adaptable**, **fast-learning**, and experienced in working effectively in **multicultural team environments**.

Education:

Yeditepe University – **Computer Science Engineering (2022-)**

Université de Technologie de Belfort-Montbéliard - **Computer Science Engineering (February 2026 – July 2026)**

– Relevant Coursework: **Intelligent Analytics and Data Management**, **Foundations of Data Science**, **Big Data Business Intelligence**, **Blockchain and Distributed Systems**, **Software Engineering**, **Cloud Engineering**

Internship Experience:

API Developer Intern | Cloudpeer Global Technology | July 2025 (C# / .NET / Blazor / API Integration / SQLite):

Contributed to the development of a Blazor-based web application integrated with an existing Mock API system. Developed frontend features for data visualization, authentication, and filtering using C# and Razor Components; integrated SQLite for dynamic CRUD operations; and performed API testing and system validation using Postman.

Projects:

– **Linux Firewall Rule Management & Monitoring Application:**

Developed a **PyQt5 GUI** for **managing and monitoring Linux iptables INPUT chain rules**, implementing **rule lifecycle management**, **traffic statistics analysis**, **rule reordering**, **input validation**, and **whitelist/blacklist operations**. (Demo available on [Youtube](#))

– **Decentralized P2P Video Streaming Application (Java):**

Developed a **fully decentralized peer-to-peer video streaming** system using **UDP-based network discovery**, **TTL-controlled flooding**, **multithreaded TCP communication**, **concurrent multi-source downloading**, **out-of-order chunk reassembly**, **SHA-256 file verification**, and **GUI-based network search and media playback**.

– **Smart Parking Management System Website (HTML / PHP / SQL):**

Developed a **role-based web application** with **reservation management**, **parking availability tracking**, **messaging**, **announcements**, and **relational database integration**. Designed system architecture and **UML models** including **Class**, **Sequence**, and **Activity Diagrams**.

- **Music Player Website (HTML / PHP / SQL):**

Built a **database-driven music platform** with **playlist creation**, **music and artist search**, **album and genre exploration**, and dynamically managed user and media data through **automatically generated database tables**. Designed the **database architecture** using **ER diagrams** and mapped system navigation through **Action Flow models**. (Demo available on [Demo](#))

- **Intelligent Analytics & Data Management:**

Python, Pandas, Selenium, BeautifulSoup, OpenRefine, PySpark, Apache Spark

Applied **web scraping**, **data collection**, **data cleaning**, **outlier detection** using **IQR**, **dimensionality reduction** using **PCA**, and **distributed data processing** with **Apache Spark RDDs and DataFrames**.

- **Semantic Web, Knowledge Representation & Graph Analytics:**

RDF, OWL, SPARQL, SWRL, Neo4j, Graph Data Science

Built RDF/OWL knowledge models and ontologies, performed SPARQL querying and SWRL-based reasoning, and analyzed graph data using Neo4j and Graph Data Science algorithms including centrality analysis, shortest paths, and community detection.

- **Blockchain & Distributed Systems:**

Solidity, Geth, MultiChain, Truffle, Ganache, Web3.js, Mocha

Configured multi-node private blockchain networks, implemented peer-to-peer transactions, and developed and tested Ethereum smart contracts using Solidity, Truffle, Ganache, Web3.js, and Mocha.

Technical Skills:

Programming: Python, Java, C#, C++

Data Engineering & Analytics: Pandas, PySpark, Apache Spark, Data Preprocessing, PCA, IQR Outlier Detection

Graph & Knowledge Representation: Neo4j, Graph Data Science, RDF, OWL, SPARQL, SWRL, Graph Algorithms

Blockchain: Solidity, Geth, MultiChain, Truffle, Ganache, Web3.js

Web & Desktop: .NET, Blazor, Razor Components, PyQt5, HTML, PHP

Databases: SQL, SQLite, Relational Database Design

Systems & Networking: Linux – TCP/UDP Sockets – Multithreading – iptables – Concurrency

Software Engineering Concepts: Object-Oriented Programming, Design Patterns, Clean Code, UML

Tools: Git, GitHub, Postman, VirtualBox – Relational Databases

Volunteer Experience:

- **Innovation Crunch Time — Multidisciplinary Innovation Project:**

Collaborated with a **multidisciplinary team** of 10 participants **from 6 different countries** during the one-week Innovation Crunch Time event to develop an **accessibility-focused rain protection system for wheelchair users**, aimed at improving comfort and mobility in rainy conditions. Contributed to ideation, solution evaluation, design, and development of a functional prototype, which was presented to an ADAPEI supervisor, demonstrating **teamwork**, **problem-solving**, and **cross-cultural communication skills**.

Certificates:

[NVIDIA — Accelerating End-to-End Data Science Workflows Certificate \(2026\)](#)

[Tech & Dev Talks Seminar \(Coderspace\) Attendance Certificate \(2024\)](#)

[Sabanci University Summer School Attendance Certificate \(2019\)](#)

- Introduction To Computer Programming Course

- 3D Organ Design Course
